

## DRIPLINE

## DRIP IRRIGATION SYSTEM

Drip irrigation system reduces water consumption by 50%. With drip irrigation, water application is more frequent which provides a favourable moisture level for plants to thrive. In this system, water is applied locally and leaching is reduced. Fertilizer/nutrients loss is minimized, minimizing operation costs due to low weeds production and soil erosion.

**KAKA** Irrigation Simplified

## PE FITTINGS

## DAMLINER

Custom made damliners are more flexible and they are the right fit for medium sized ponds, lakes and water bodies. At Ago Ventures, you get advanced and affordable liners that will ensure water availability to your family, saving on cost as compared to tanks. containment liners will prevent water seepage and at the same time prevent water contamination from harmful toxins surrounding soil in your water.

## GREENHOUSE (Vatan Greenhouse Covers)

This is the most effective farming method since

it ensures 24hrs production and prevents spread of pests and diseases among plants.

This ensures maximum profits.

Other than that it ensures all year round production.

for your security and stability of greenhouse farming, welcome to Ago Ventures Ltd.

# About Us

Ago Ventures is a fast growing Kenyan irrigation company that specializes in irrigation design, installation and maintenance as well as greenhouse project consultation.

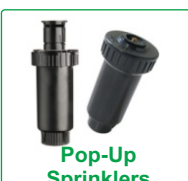

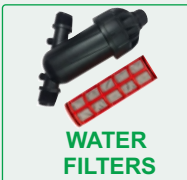

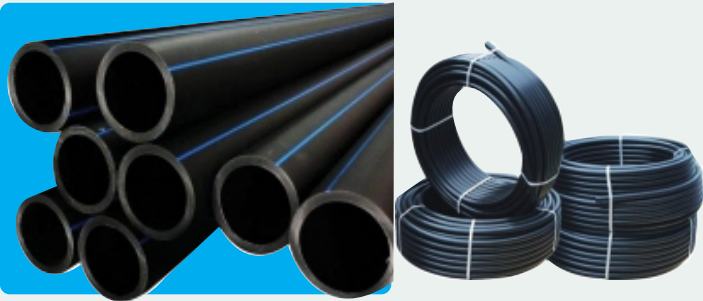

We have established ourselves as a leading brand in the market with creative concepts and high quality products in just a few years and we are committed to serving you better.

We've set up a joint agreement that will provide new opportunities for both small and large -scale farmers to purchase Ago Ventures' latest agricultural technologies, allowing them to enhance their farm output while also empowering new farmers. Our services include borehole drilling, installing pumps, designing and installing irrigation systems, installing water fittings and accessories such as filters, computerized irrigation systems among other services associated with irrigation and pipes.

We specialize in providing innovative pumps, motors and controllers that growers and producers need to minimize downtime and increase yields.
